F/CE Exploratory on Human Growth and Development Unit

Human growth and development is a subject surrounded by fiction and complex facts. For most students learning to distinguish between fiction and fact, and to understand the facts, is an educational process that takes time. Learning about puberty, their reproductive system and menstruation is as important for boys as it is for girls. Students who are introduced to these subjects co-educationally gain a better understanding of an appreciation for the similarities and differences between the sexes.

You are welcome at any time to review the video and worksheets at the middle of school LMC. Please notify us in advance so that we may have them ready for you there.

6th Grade

Day 1 - Facts and Fables - Worksheet

Day 2 - Male Reproductive System - video and discussion

Day 3 - Female Reproductive System - video and discussion

Day 4 - Review of the Reproductive Systems - menstruation and menstrual supplies

Day 5 - Friendship Skills

Day 6 - Test

7th Grade

In 7th grade we review anatomy and physiology and discuss genetics. The following are the approximate days and topic areas for this four day curriculum.

Day 1 - Review from 6th grade and video on male/female anatomy

Day 2 - Anatomy and physiology readings and discussion

Day 3 - Genetics

Any parent/guardian who wishes to exclude their child from the Human Growth and Development section must sign a release stating such. The child will be given an alternative curriculum. The curriculum will deal with environmental safety.
